

10 Questions to Ask Your Doctor About Immunotherapy for Breast Cancer

Being diagnosed with breast cancer can feel overwhelming, and understanding your treatment options can make a big difference. Asking the right questions can help you take an active role in your care, make informed decisions, and feel more prepared for conversations with your health care team.

Here are 10 questions you may want to ask your doctor:

- 1 What is my exact diagnosis and stage?
- 2 What are my ER, PR, and HER2 results, and what do they mean for my treatment?
- 3 Do I need additional biomarker testing, such as PD-L1 or tumor genetic testing?
- 4 Should I have hereditary genetic testing, including testing for *BRCA1* and *BRCA2*?
- 5 Is immunotherapy an option for me now? If not, could it become an option later?
- 6 What treatments do you recommend, and will I need treatment before or after surgery?
- 7 What side effects should I watch for, and when should I contact you?
- 8 How will we know whether my treatment is working?
- 9 Are there clinical trials I should consider now or later?
- 10 Could treatment affect my fertility, long-term health, or quality of life?
